FREE PUBLIC BETA · VERSION 2.3

Find your career with AI

A step-by-step guide for complete beginners: jobs, PhDs, scholarships and more, using any AI chat assistant, for free.

Abuhurairah Rahman Pathan · MSc Bioinformatics, University of Liverpool

What is this, in plain words?

A set of instructions you copy into an AI chat

- It's called a "prompt". You paste it into Claude, ChatGPT, Gemini, Copilot or similar.
- The AI then works like a careful career coach: it interviews you, searches, checks each opportunity and helps you apply.
- It never invents facts about you, and never applies for you.

Who it's for

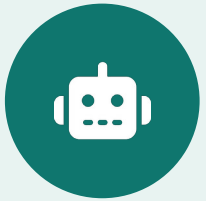

- School leavers and students
- Graduates and career changers
- People returning to work
- People moving to a new country
- Experienced professionals

What you need before you start

Internet access

A phone, tablet or computer is fine.

A free AI account

Claude, ChatGPT, Gemini, Copilot, DeepSeek or Grok. Free plans can work.

Web search switched on

So the AI can find live opportunities. Without it, paste adverts in yourself.

About 15 minutes

For the first-time interview. After that, about 10 minutes a day.

Get the prompt

1

STEP 1 OF 6

1. Open the GitHub page (link on the last slide).
2. Click master-job-search-prompt.md.
3. Click "Copy raw file" (the copy icon at the top right). The whole prompt is now copied.

Tip

You don't need a GitHub account to copy it. Prefer to fill in your details yourself? Use quick-template-prompt.md instead.

Paste it and answer the interview

2

STEP 2 OF 6

1. Open your AI assistant and start a new chat.
2. Switch on web search if you can.
3. Paste the prompt and press Enter.
4. Answer the short questions, a few at a time. About 25 in total, around 15 minutes.

Only share what you need

Contact details are optional until you want documents. Never share passwords, bank details or ID numbers. You can paste your CV to save time: remove ID numbers first.

Save your profile privately

3

STEP 3 OF 6

1. At the end, the AI writes MY PROFILE: a summary of your true details.
2. Copy it into a private note or document on your device.
3. Next time, paste the prompt plus your profile into a new chat.

Why this matters

Most AI chats forget everything between conversations. Your saved profile and tracker are its memory. Keep them private: never post them online.

Type a command to search

4

STEP 4 OF 6

Type this	What you get
EXPLORE	Not sure what to aim for? Suggests 3–5 career paths that suit you
SEARCH JOBS	Jobs, apprenticeships, internships and graduate schemes
SEARCH PHD	Fully funded PhDs for your fee status
SEARCH STUDY	Funded degrees, salaried fellowships and free training
SEARCH BOTH	One job and one PhD
SEARCH ALL	One pick from each category
IS THIS A GOOD OPPORTUNITY?	Paste any advert for an honest verdict

Each search gives one main pick, plus one career-building opportunity you can do now.

Read the result: four clear statuses

STEP 5 OF 6

VERIFIED

Open, you meet the published essential criteria, and the key facts are confirmed with links.

ASK FIRST

Looks right, but one point needs confirming, for example sponsorship. You get the exact question to ask.

UNVERIFIED

The page couldn't be opened, or the evidence is missing. Check it yourself before trusting it.

REJECTED

Closed, a requirement not met, not fully funded, or a scam. You get the reason.

The score out of 10 is only a guide to help you prioritise. Always open the link yourself before applying.

Apply, then mark it done

6

STEP 6 OF 6

1. Type PROCEED and the opportunity's name.
2. The AI writes a tailored CV and cover letter (or personal statement) following your country's style.
3. Check every line, add one sentence in your own words, then apply yourself.
4. Type APPLIED so it isn't suggested again.

You stay in control

It never applies or sends emails for you. Send a screenshot of any application form and it will help you answer the questions honestly.

Use it every day in about 10 minutes

- Paste the prompt, your profile and your tracker into a new chat, and type DAILY
- It reminds you of deadlines and re-checks that your saved opportunities are still open
- It runs a fresh search, skipping anything you've already applied for
- Save the updated tracker privately before you close the chat

On a free plan?

A full SEARCH ALL can use 30–40 web searches. Run one command a day, such as SEARCH JOBS, so you don't hit your message limit halfway through.

Stay safe and honest

Spot scams

Never pay an employer, recruiter or agent for a job, interview, training or sponsorship certificate. Official government visa fees, paid on the government's own website, are normal.

Protect your data

Share only what you need. Don't post your profile publicly. Under 18? Follow your assistant's age rules and ask a parent, carer, teacher or careers adviser to help.

Not legal advice

Visa and funding checks are a guide. Confirm the rules on official government and funder websites, or with a qualified adviser.

What has been tested so far

19 / 19

simulated tests passed

2 / 2

live searches passed (UK and Germany)

1

AI assistant tested so far (Claude)

This is a Free Public Beta. Tests were run on 25 October 2026 in one assistant, and every live result was checked against the real page. It hasn't been tested in other assistants yet, so results may differ. AI can still make mistakes: always check the link yourself.

Full results: TESTING.md on GitHub

Free for everyone, everywhere
